Ethan Scherwitz

Richardson, TX 75080 | ehallscherwitz@gmail.com | 832-906-9976 | linkedin.com/in/ethan-scherwitz333 | github.com/ehallscherwitz

Education

University of Texas at Dallas Aug. 2023 – Expected May 2027
Bachelor of Science in Computer Science *Dallas, TX*

Experience

Software Engineer Program Intern Jun. 2026 – Aug. 2026
JPMorgan Chase & Co. *Plano, TX*

- Collaborated within an **agile environment** alongside a cross-functional **SRE** team to engineer a **Python** automation system that surfaces failed, slow, and stuck batch jobs in real time, solving business problems by preventing silent anomalies from escalating into production incidents.
- Architected an **LLM**-driven diagnostic pipeline that analyzes historical failure patterns against a custom **SQL** database to auto-generate actionable remediation solutions and incident summaries, boosting resolution efficiency by up to **40%**.
- Improved system resilience through proactive job flagging, dependency tracking, and SSO/authentication hardening against UI changes, delivering complete technical documentation for seamless handover.

Business Owner & Sole Platform Developer Sep. 2023 – Present
Sleptonvintage (E-commerce Platform) *Dallas, TX*

- Architected and launched a custom e-commerce platform using **Node.js** and **React.js**, integrating the **Pinterest API** and programmatic SEO to securely handle user profiles and drive external acquisition.
- Designed a relational database infrastructure using **PostgreSQL** to manage real-time inventory drops, product filtering, and transactional states, generating over **$20,000** in sales.

Project Systems & Data Intern May 2025 – Aug. 2025
Fluor Corporation *Houston, TX*

- Engineered enterprise automation scripts and **data engineering** workflows utilizing **Java** and **PowerShell**, producing comprehensive technical guides that optimized document control pipelines department-wide.
- Audited multi-branch folder structures and enforced **RBAC schemas** across Active Directory for 1,600+ personnel, securing a repository of 3,000+ sensitive files.

Projects

Tactile | *FastAPI, MongoDB, LangChain, Groq, MediaPipe, React.js* Mar. 2026

- Architected a real-time spatial computing tool at a Figma design-a-thon, tracking webcam hand coordinates using **MediaPipe** to control the design canvas via user hand gestures.
- Built an asynchronous backend API using **FastAPI** connecting a custom Figma plugin to **MongoDB** to capture styles, leveraging **LangChain** and **Groq LLMs** to generate new canvas frames.

HackLab | *Node.js, Express.js, PostgreSQL, AWS, Gemini AI* Feb. 2025 – May 2025

- Co-developed a full-stack engineering collaboration matchmaker on **AWS/PostgreSQL**, winning **1st Place Overall** and **Best Design** in ACM Projects.
- Engineered an entire RESTful API from the ground up using **Node.js** and **Express.js** to drive complex server-side integrations, including GitHub OAuth, LinkedIn profile mapping, and an automated **LaTeX format resume generator** leveraging the **Gemini API**.

Organizations

ACM (Association for Computing Machinery) | *Development Officer* May 2025 – Present

- Full-stack developer building a campus portal for student organizations, using **JavaScript** and **TanStack Query** to optimize data caching, query sync, and page responsiveness.
- Engineered an automated check-in system with dynamic QR codes (TTL intervals) and fine-grained server-side **RBAC schemas**.

Third Space | *Lead Web Developer* Dec. 2025 – Present

- Directed creative direction and led the founding engineering team to launch a digital editorial platform in under 3 months, defining database models, routing schemas, and delivery protocols.
- Designed and implemented interactive storytelling elements and dynamic issue feature layouts using **React.js** to drive reader engagement.

Technical Skills

Architectures & Concepts: Agile Methodologies, Data Engineering, Agentic AI Workflows, SRE & Observability, Distributed Systems, Event-Driven Architecture, RESTful APIs, RBAC, Data Lifecycle Management
Languages: Python, JavaScript, Java, C#, SQL, C++, PowerShell
Frameworks: Node.js, Express.js, React.js, FastAPI, LangChain, Supabase, MongoDB, PostgreSQL, AWS, Git, MediaPipe
